The RRM-Safety Barrier or portable barricade is a specialty barrier that is superior in strength and quality to the competition. If your needs are force protection, physical security, crowd control, flight line and hangar security or recreational use, this barrier is for you. These portable barricades are lightweight and extremely easy to transport making for quick deployment and recovery. Unlike concrete traffic barriers, the use of heavy equipment is not necessary for installation or relocation. When positioned and filled with either water or sand the barricade can act as a protective or prefabricated revetment wall. While filled with ballast the RRM-Safety Barrier will not bulge or distort like other portable barricades. The RRM-Safety Barrier is designed to be stronger and more durable than others yet still be cosmetically pleasing.
